## Distri as a Integrator and Site Improver

- Distri established 1986
  - Focused on terminal automation and system deliveries.
  - More than 25 full terminal TAS system projects executed.
  - Own proven concepts for loading racks, tank monitoring, transfers and inventory.
- Distri's strategic target is to bring added value to customers by simplifying terminal processes and practices or build new features "over" multiple existing systems.
- Distri aims at reusing concepts and software once initially innovated and developed for a single customer need or solution request.
- Distri does the development ourselves or specifies the necessary developments to our long term partners.

## Future Terminal Market – Distri Vision

#### **Terminals**

- Terminal volumes are decreasing -> operation cost per unit increasing.
  - > High pressure to reduce fixed costs and investments.
  - > Tank capacity utilization levels decreasing.
    - > Causing challenges to operate and maintain terminals
- Terminal operation costs increasing due to tighter environment legislation.
  - Pushing focus to better and more cost effective automations and processes

#### **Customer Base**

- Service station network will be decreasing if volumes keep dropping
  - Delivery distances are increasing and delivery routes getting more complex
- Logistic costs.
  - Delivery optimization and demand predictions play a bigger role in future.

#### **Product Owners**

Ready to decentralize product deliveries, into multiple terminals and for shorter term contracts to achieve operational and logistic savings

## Distri Terminal Automation Strategy

- Re-use own concept investments in different locations
- Re-use current accepted flow computers and upgrade their user interfaces for better user experience and safety.
- Use industry standards and widely used architectures (wide usage leads to lower price level) to save both investment and maintenance cost.
- Mobility capability for loading equipment's thru re-use in next location
  - Plan for fast, easy, cheap re-location of loading units
    - Loading Rack
    - TAS-system with inventory
    - Additives
    - Field control

## Dearman System LLC IS OUR PARTNER

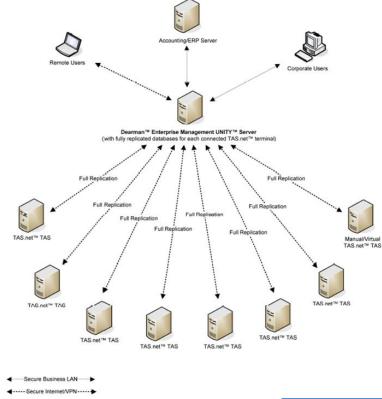

• When DISTRI was looking for good partner for Terminal Automations Systems in current changing world we ended up co-operation with Dearman Systems LLC

#### <u>Dearman UNITY server delivers robust enterprice management and automation capabilities.</u>

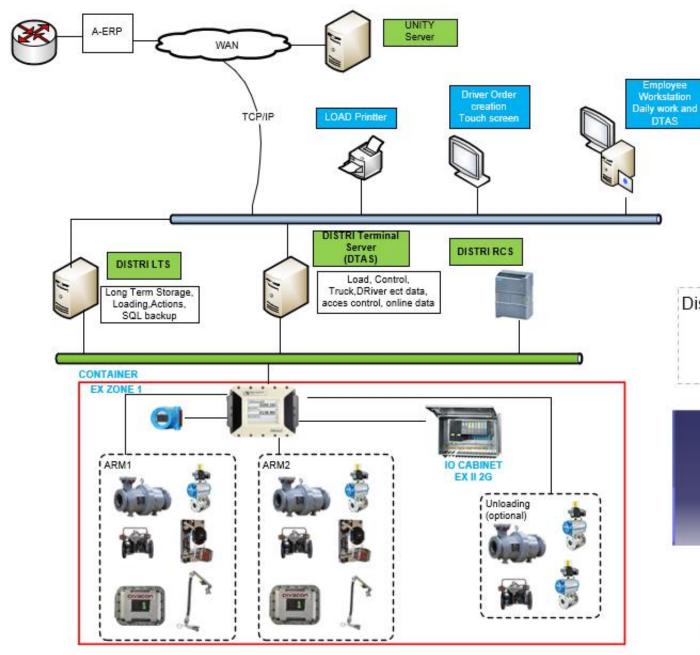

- Integration to ERP
- Support common transaction processing protocols
- Connect terminals that handle/store different products to UNITY
- Unlimited number of terminal can be connected
- Host on corporate private cloud or server
- Corporate level inventory capability
- Dearman TAS provide full real-time read/write capabilities in UNITY

#### **TAS.net Terminal Management Software**

- Strong asset base: more that 250 terminal in 100 countries
- Advantages process control technology
- · Rail Operations and Transloading included
- Wide range of supported Hardware
- Redundancy, Fault Tolerance, and Enhanced Data recovery
- Administration and Security
- Automated reporting
- Good scalability

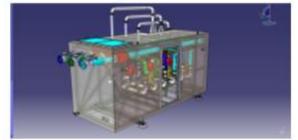

Distri TLS (Truck Loading Solutions)
Requires only
1 Power cable
1 Optical|Eiberline

DISTRI Principle Layout 2022 OP Melin

## Upgrade your existing loading rack

#### **DISTRIBUTOR**

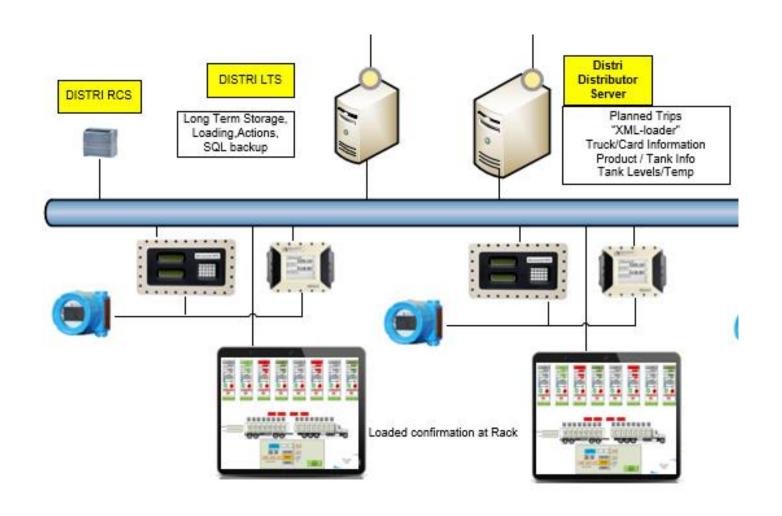

- Distributor is a distributed loading control system based on user friendly big ATEX zone 1 touch screen on the loading rack.
- Implements loading sequence in a safe and easy to understand way for the user. Status of the loading is observable at one glance from one screen.
- Planned load input uses same XML-file format as existing systems and DTAS
- Provides unified user interface for different Accuload III and IV
  - I.e. one driver user interface for different Accuload models even in same rack
  - Increases capability to load multiple compartments in a safe manner
  - May enable more arm's per flow computer

### **DISTRI LTS (Long Term Storage)**

- Implements flow computer memory extension by creating a long-term protected storage of loading notes in digital form.
- Solution enables sufficient measurement archive keep time for the EU MID i.e. Custody Transfer and other mandatory needs
  - Customer must have access to MIDmeasurement originals, if customer is not able to witness/observe the measurement used in custody transfer
  - Original bookkeeping receipts relevant to taxation must be available several years after tax year

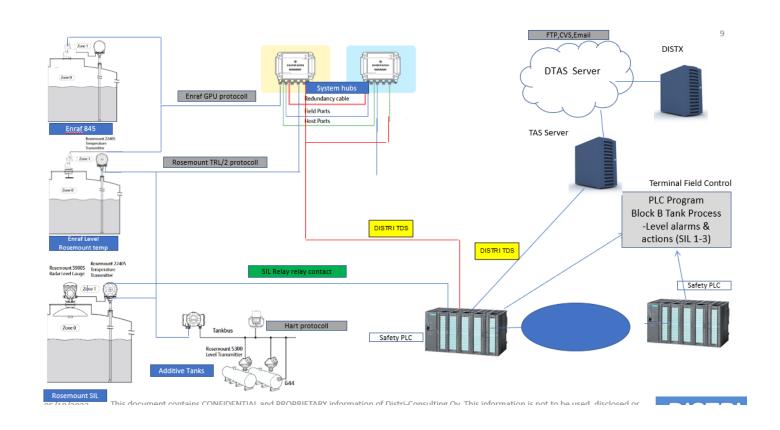

# DISTRIBUTOR CONSEPT

## **Distri TDS (Tank Data Software)**Support major ATG interfaces

Enables field/tank control and Inventory functionalities at the same time

Fulfils SIL2 or even SIL3 safety level

Copyright © Distri-Consulting Oy 2022 All rights reserved

## **Distri TLS (Truck Loading Solution)**

Easy to move and relocate.
Only one fiber connection and one power cable needed

Typical solution 6m long, 3 arms with 2-products each

MID approved solution
